CONVERSION CHART GEAR OIL VS. ENGINE OIL

Many owner's manuals spec out 10w40 engine oil for use in motorcycle gear boxes. Maxima MTL is available in 75, 80 & 85wt. Keep these points in mind and use this cross reference chart when making your buying decision:

- 1) Gear oil viscosity is taken at 40°C
- 2) Engine oil viscosity is taken at 100°C

The difference in the viscosity reading (weight) is due to the temperature difference.

GEAR OIL	ENGINE OIL	IDEAL USE
75WT	30WT ENGINE OIL (E.G., 5W30 OR 10W30)	50cc - 125cc
80WT	40WT ENGINE OIL (E.G., 10W40 OR 20W40)	125cc - 500cc MOST POPULAR WEIGHT
85WT	50WT ENGINE OIL (E.G., 15W50 OR 20W50)	DESERT AND ENDURO

PROFILTER READY-TO-USE AIR FILTERS READY-TO-USE, READY-TO-RACE

When you get ready to change your filter, change to ProFilter. A new perfectly oiled ProFilter air filter provides maximum airflow and increased horsepower. ProFilter Ready-To-Use air filters are constructed of dual-layer, reticulated foam. Reticulation is a process that opens up the foam cells, allowing for increased air flow and horsepower. The dual foam layers differ in foam pore size – the innermost foam consists of a more dense foam to catch fine particles of sand and powder, whereas the outermost foam is constructed of a more open pore matrix allowing for filtration of larger micron dirt particles. The open porosity of the outer foam also helps the air filter resist plugging. Air filter seams are welded with industrial strength adhesive and all filters come with a rubber grommet to help secure the filter in place to the cage, eliminating tearing and keeping the structural integrity of the filter intact.
